

MagicSpam®

The best antispam for your mail server.

MagicSpam for Plesk – Installation Guide

Thank you for your purchase!

This installation can be completed in just three easy steps, Download, Install and Configuration. Your most difficult task is ensuring that you download the module that matches your system. If you are presented with multiple choices, carefully select the one that matches your Operating System, the MTA/Product Version and the 32/64 bit OS your system is running as.

If you don't know which one to choose, please contact your hosting provider or system administrator to be certain, otherwise there may be unknown and possibly service affecting consequences.

First, you will need to download the appropriate MagicSpam module package from the following URL.

<http://www.magicspam.com/download/>

Enter your License Key to proceed. You will be presented with a menu similar to the following for selecting the appropriate MagicSpam package. Click the MagicSpam package matching your Operating System/Distribution and proceed to download the package. Once the download is complete we proceed to the second step.

MagicSpam for Plesk (Unlimited Domains) (1.0.8-1.1)

Select your operating system...

– Select your Operating System –

Release 1.0.8-1.1

Release 1.0.8-1.1

Open your browser and point to <https://<yourserverip>:8443>.

Please also uploaded the installation file downloaded in the previous step, to you server.

Log into Plesk using your administrator username and password.

The screenshot shows the Plesk Web Host Edition login page. At the top, there is a header with the Plesk logo and the text "Parallels® Plesk Web Host Edition". Below the header, there are three input fields: "Username", "Password", and "Interface language" (which is a dropdown menu set to "Default"). To the left of the "Interface language" dropdown is a link that says "Forgot your password?". To the right of the input fields is a "Log in" button. At the bottom of the page, there is a small copyright notice: "© 1999-2014. Parallels IP Holdings GmbH. All rights reserved."

MagicSpam®

The best antispam for your mail server.

Find Extensions on the left hand side of the screen and click on it. Please note on older versions of Plesk it might be named modules

Upload New Extension

Installation is now complete and we can proceed to the configuration.

MagicSpam®

The best antispam for your mail server.

This is where you will enter the license key which you had previously purchased from our MagicSpam Store. After entering your license key please click the save button. You will also need to enter your administrator email address in this window and save that setting as well. Finally, you can click the button to "Enable Protection"!

The screenshot shows the MagicSpam web interface. At the top, there's a navigation bar with tabs: Dashboard, Logs, Stats, Settings (selected), Alerts, and Support. Below this is a sub-menu with links: System, Exemptions, Server Policies, IP Reputation, and Rate Limiters. The main content area is titled 'MagicSpam Protection Status' and includes a 'Help' icon. It states 'Protection is currently: Disabled' with an information icon. Below this, it explains that when protection is enabled, IP Reputation and Best Practices rules are applied. There's an 'Enable Protection' button. To the right, the 'MagicSpam License Key' section prompts the user to enter their license key, with a link to the MagicSpam Store. It includes 'Cancel', 'Clear', and 'Save' buttons. Below this is the 'Options' section, also with a 'Help' icon. It contains three input fields: 'Inbound Message Limit' (set to 150), 'Administration Email Address' (empty), and 'Number of days to store logs' (set to 7). Each field has a descriptive text to its right: 'Maximum inbound messages permitted.', 'Address receives system notices / updates.', and 'Logs can be stored on the server for up to 60 days.' There's a 'Save' button at the bottom right of the Options section and a checkbox for 'Advanced Options'.
