

MagicSpam[®]

The best antispam for your mail server.

MagicSpam for Plesk – Installation Guide

Thank you for your purchase!

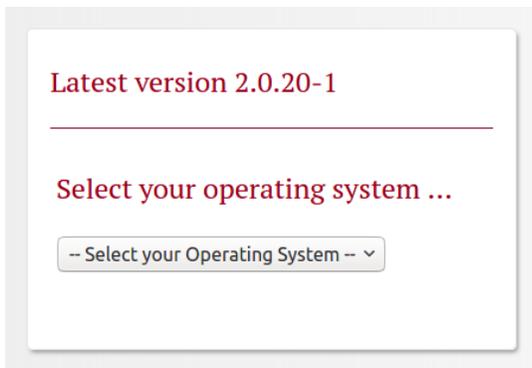

This installation can be completed in just three easy steps: **Download**, **Installation** and **Registration**.

Download

The first step is to download the appropriate MagicSpam installation package from the following URL:

<https://www.magicspam.com/download/>

Enter your License Key to proceed and you will be presented with a menu similar to the following:

Select and download the installation package that matches your system. If you are presented with multiple choices, carefully select the one that matches your Operating System, System Architecture (32/64-bit), Mail Transfer Agent (MTA) and Product Version.

Make sure to select and download the correct installation package, otherwise you may run into issues during the installation process. If you don't know which one to choose, please contact your hosting provider or system administrator to be certain.

Installation

Now that you have downloaded the MagicSpam installation package that matches your system, it is time to install MagicSpam on your system. Log into your Plesk Administrative Interface and navigate to the Extension Manager (Server Management > Extensions > My Extensions).

Install MagicSpam by clicking on the 'Upload Extension' button and upload the previously downloaded MagicSpam installation package.

Please note that as of Plesk version 17.x, the 'Upload Extension' button is not available unless you add the following configuration lines to the `/usr/local/psa/admin/conf/panel.ini` file:

```
[ext-catalog]
extensionUpload = true
```

Alternatively, you can install MagicSpam via the command line by uploading the MagicSpam installation onto your system and running the following command:

```
plesk bin extension --install /path/to/file.zip
```

e.g.

```
plesk bin extension --install /root/magicspam-plesk-2.0.20-1-Linux.zip
```
