

MagicSpam[®]

The best antispam for your mail server.

MagicSpam for Zimbra – Installation Guide

Thank you for your purchase!

This installation can be completed in just three easy steps, Download, Install and Configuration. Your most difficult task is ensuring that you download the module that matches your system. If you are presented with multiple choices, carefully select the one that matches your Operating System, the MTA/Product Version and the 32/64 bit OS your system is running as.

If you don't know which one to choose, please contact your hosting provider or system administrator to be certain, otherwise there may be unknown and possibly service affecting consequences.

First, you will need to download the appropriate MagicSpam module package from the following URL.

<http://www.magicspam.com/download/>

Enter your License Key to proceed. You will be presented with a menu similar to the following for selecting the appropriate MagicSpam package. Click the MagicSpam package matching your Operating System/Distribution and proceed to download the package. Once the download is complete we proceed to the second step.

MagicSpam for Zimbra (1.0.8-1.1)

Select your operating system...

Show All

Release 1.0.8-1.1 Zimbra Collaboration Suite 6.0
Release 1.0.8-1.1 Zimbra Collaboration Suite 6.0

Before beginning this section, ensure you are logged in as a user with root privileges to your server. This is required in order to successfully install the MagicSpam for Zimbra package. Please also uploaded the installation file, downloaded in the previous step, to you server.

Open a terminal session and enter the following commands, ensuring that you replace the directory location and filename to match your downloaded installation file.

Software Dependancies:

For Ubuntu or Debian:

```
apt-get update  
apt-get install libdb4.8 libxml2 curl bzip2 libxml2
```

For RHEL or CentOS:

```
yum install libdb4.8 libxml2 curl bzip2 libxml2
```

Install:

For Ubuntu or Debian, taking care to use the proper file path to the uploaded installation file:

```
dpkg -i magicspam-zimbra.deb
```

For RHEL or CentOS, taking care to use the proper file path to the uploaded installation file:

```
rpm -i magicspam-zimbra.rpm
```

MagicSpam[®]

The best antispam for your mail server.

This will begin the installation process.

During installation you may see the Cron daemon be restarted or several messages involving the creation of files and this is expected behavior. Allow a few moments for the install to complete. Once the installation has completed you will be returned to the command prompt and greeted with a message similar to the following:

```
=====
Installation complete! Your next
step is to point a web browser to:
https://:6244
to configure and enable!
-----
Be sure to check out the online
forums (http://forums.wizard.ca)
Enjoy!
```

Installation is now complete and we can proceed to the third step.

Open up your Internet browser to your server IP address, at port 6244. (*https://<serverip>:6244*)

At this stage MagicSpam for Zimbra will ask you to set an admin password. After you type and confirm your password click on save.

 **MagicSpam[®]** (Disabled)

Welcome to MagicSpam!

Before we get started, you will need to set a new password for use with the MagicSpam Management Console.

Once the password is set, you can log in as user **admin** with your new password

For added security, it is advised that you ensure access to port 6244 on this server be restricted to *Just* those IPs you will be administering MagicSpam from
